- 1. Read the following passage and answer the questions given at the end.** (10)

The first and the most important thing in increasing one's chances of getting employed is to get clarity on what job fits one's personality. People who choose careers that suit their personality are most likely to be satisfied and successful. For example, if you are flexible, spontaneous and creative then the advertising industry could be an interesting option for you. If you like numbers and working by yourself then accounting could be the thing for you. You need to evaluate your qualifications and your personality traits in order to make the best choice. Once you have identified the job field that fits your personality, it is important to identify the job requirements and align those with your education and work experience. If you are looking for a job in an industry where you have prior work experience or have done an internship, then you can highlight this fact in your resume.

Once you know what kind of opening you would be targeting, then prepare a good resume, which showcases you rather than your dear friend or your whole class. Nowadays most companies use recruiting management software to screen candidates for job opening. Resume keywords are the words that those hiring managers search for when going through their database of resumes. In order to get noticed, your resume needs to contain keywords that directly target the jobs you are interested in. So start searching keywords specific to your job requirements, your

skills, software and technology competencies and relevant credentials.

Most of the companies rely on recruitment agencies and job portals for acquiring the talent. So post your resume in different placement agencies. Apart from these, it is a good idea to pass around your resume to friends and family, and let everyone know that you are looking for a job. A company employee can refer you when there is a job opening.
